# Sage 500 ERP

# Customizer

#### Improve Efficiency by Customizing Your System

Sage 500 ERP (formerly Sage ERP MAS 500) Customizer enables you to modify screens and forms easily to match your specific business process and improve staff productivity. Even if you lack extensive programming knowledge, you can use Customizer to adapt form controls, tab sequences, and more, without changing the source code. This will help you easily transition to future application upgrades.

You can enable business logic, define custom processes, or add new controls or application functionality by using the scripting languages included with Customizer. This powerful feature also offers easy management of customizations through a server-based repository. You can even enable, disable, and delete customizations through a centralized customization management console.

Customizer provides the luxury of controlling application customizations to all users, or to specific users or groups, including departments, companies, executives, or combinations of all of the above. It can also alter application interfaces and add fields to forms using a shortcut approach that saves valuable time. In addition, you can attach field controls to database values, allowing you to add new fields to forms.

As a key component of Sage 500 ERP—powerful business software that offers superior reliability, flexibility, and integration with your existing line of business applications—Customizer is a tremendous solution for modifying the tools you work with every day. Using Customizer can add productivity to your processes and give you smarter decision-making capabilities by providing customized information.
