Sage 500 ERP

Intelligence Reporting

Sage 500 ERP (formerly Sage ERP MAS 500) Intelligence Reporting empowers you to quickly and easily gain control and obtain the information you need for operations and strategic planning. Using the familiar look of Microsoft Excel, analyze Sage 500 ERP data. Effortlessly create real-time, automated, and preformatted reports with up-to-date, accurate, and meaningful information. Intelligence Reporting allows you to spend more time focusing on analysis and interpretation and less time pulling the data together.

Improve the productivity of your financial staff, enhance report presentation, and streamline report preparation. Build a reporting solution so it works the way you want, using the flexibility of Intelligence Reporting license and module components.

Report Manager

Report Manager license allows you to create and edit new reports as well as to filter and aggregate data. You'll receive a basic set of standard report templates with Report Manager. These templates provide easy-to-use, in-depth financial, operations, and strategic planning intelligence visibility, so you can focus on ROI and results. Use the flexible security to establish and set permissions for your reports.

Report Viewer

A Report Viewer license provides you with the ability to view reports, and drill-down into existing reports and templates. Basic editing capabilities, such as filtering the data and changing the parameters, are also included. Report Viewer licenses are ideal for staff members who do not need to create new reports.

Report Designer

The Report Designer module expands upon the functionality of the Report Manager to provide simplified "drag and drop" report creation and Reporting Trees capabilities for powerful financial reporting and analytics across your business.

Connector

Streamline your financial managers' day-to-day operational tasks using the Connector module to access information from multiple sources and consolidate data from multiple companies. The Connector module allows for consolidations and connectivity to unlimited ODBC data sources.
